EDUCATION

Rutgers University - The State University of New Jersey

New Brunswick, NJ

Bachelor of Science, Computer Science & Data Science | Dean's List

Aug. 2026

TECHNICAL SKILLS

Languages: Java, SQL, Python, JavaScript

ML / Data: PyTorch, PyTorch Geometric, TensorFlow/Keras, scikit-learn, Pandas, NumPy, NLTK, FastAPI

Backend: Spring, Spring Boot, Spring Security, Hibernate/JPA, REST APIs, WebSockets

Databases: PostgreSQL, Redis

Testing/Build: Maven, JUnit 5, Mockito, Git

Cloud/DevOps: AWS, Docker, Terraform, Linux, GitHub Actions, CI/CD

Concepts: Object Oriented Design, Concurrency, Microservices, Distributed Systems, Agile/Scrum, SDLC

EXPERIENCE

Software Development Intern

Jun. 2025 – Aug. 2025

Samsung SDSA

Ridgefield Park, NJ

- Built a full-stack VDI provisioning portal using Java, Spring Boot, and React, replacing manual ticket workflows with automated VM request, approval, and audit-tracking pipelines.
- Developed 20+ REST APIs across authentication, user management, and request workflows using Spring Security, JWT, and role-based access control, reducing manual coordination by 20 hours per week.
- Designed Hibernate/JPA domain models backed by PostgreSQL and implemented automated email notification workflows using Spring Mail and Thymeleaf across approval stages.
- Created backend test coverage using JUnit 5 and Mockito and delivered services through Maven-based development workflows within a Git and Agile/Scrum environment.

Data Analytics Extern

Sept. 2024 – Dec. 2024

Colgate Palmolive

Piscataway, NJ

- Consolidated 5+ marketing and finance datasets into a unified reporting pipeline used by 3 teams for KPI tracking and quarterly business decisions.
- Automated recurring dashboard updates using Google Apps Script, reducing manual reporting effort by 4 hours per week and improving data accessibility.

PROJECTS

Cross-Domain GNN Recommender | *Python, PyTorch, PyTorch Geometric, scikit-learn* Jan. 2026 – May 2026

- Built a graph neural network recommender in PyTorch/PyTorch Geometric that transfers user preferences across Amazon review domains (Movies & TV → Books) via link prediction, using a shared GCN encoder with an embedding-alignment loss over overlapping users.
- Implemented and benchmarked four models – matrix factorization, neural collaborative filtering, a single-domain GCN, and the cross-domain GCN – with negative sampling and early stopping; the cross-domain model improved NDCG@5 by ~12% over the strongest baseline and ~67% over a single-domain GCN.
- Engineered a Pandas/NumPy pipeline to parse multi-million-row Amazon review files, apply iterative k-core filtering, detect cross-domain user overlap, and construct bipartite graphs, evaluating with Precision@K, Recall@K, NDCG@K, and Hit Rate.

NYC Airbnb Price Prediction | *Python, scikit-learn, TensorFlow/Keras, FastAPI*

Oct. 2025 – Dec. 2025

- Developed an end-to-end ML service predicting NYC Airbnb prices from ~70K merged 2019/2024 listings, training and comparing linear regression, a 250-tree random forest, and a Keras neural network on MAE/RMSE.
- Engineered features with scikit-learn pipelines (StandardScaler + OneHotEncoder via ColumnTransformer), including VADER sentiment scores (NLTK) over listing text and KMeans geo-clustering of coordinates.
- Served real-time predictions through a FastAPI endpoint (Pydantic validation, cached model artifacts, CORS) consumed by a JavaScript frontend, with Pandas cleaning workflows to reconcile schema across datasets.

FlightDeck - Coding Agent Control Plane | *Java, Spring Boot, PostgreSQL, WebSockets*

Jul. 2026 – Present

- Building a Java 21/Spring Boot backend for managing AI coding-agent sessions and execution events, integrating Claude Code, Codex, Gemini, and OpenHands with PostgreSQL persistence and REST/WebSocket APIs.
- Developing a provider-agnostic ingestion layer that normalizes lifecycle events from coding agents into a unified event model.
- Implementing asynchronous event forwarding with Git commit attribution that links code changes to originating agent sessions with non-blocking backend operation.

studyWus - Global Tutoring Platform | *Java, Spring Boot, PostgreSQL, Redis, AWS*

Sept. 2025 – Present

- Developing a scalable Java/Spring Boot backend for a tutoring marketplace using REST APIs, JWT authentication, PostgreSQL, and Redis caching, with transactional booking workflows for concurrent users.
- Implementing real-time communication using WebSocket/STOMP and WebRTC signaling for peer-to-peer interactions, containerized locally with Docker for consistency.
